

2

Environment

Introduction

Environment is a set of physical and biological factors along with their interactions that affect the behaviors and growth of organisms. Thus, environment is beyond the set of natural, biological, and non-biological factors and also includes the interaction between human and nature. By considering the fact that in 21st century, environmental protection is one of the Millennium Development Goals (MDGs) and one of the three principles of sustainable development (environment sustainability, economy sustainability, and social sustainability) and due to its increasing importance and its impacts on the socio-economic activities, a separate chapter on "Environment Statistics" was created in the Iran Statistical Yearbook 1392.

Natural environment is affected by the human activities. Three constituting factors of environments are as follows:

Water

The most important impacts of human activities on the water are summarized in three ways: water overuse, depletion of water resources, and pollution of surface and underground waters. The quality of water is a challenge which countries face. The pollution of some waters and its progressive trend is worrying. The ground waters, lakes, and springs are the main resources of fresh waters which are directly subject to pollution through human activities.

Soil

The most important impacts of human activities on soil are: soil poisoning and erosion which lead to destruction and decrease of arable land capacity; overall soil erosion is a natural process which occurs by wind or water flow, and temperature changes. However, human activities such as intense farming, irrigation of farmlands, monocropping, overgrazing, deforestation, and desertification lead to imbalance between soil formation and degradation process and finally soil pollution.

Air

Air pollution is the direct or indirect

introduction of every material by humans possibly causing undesirable impacts on human health and environment.

The information presented in this chapter include statistics of natural resources; national heritage, forests, ranges, and deserts; amount of distributed fertilizers; sold pesticides; emission of pollutants; activities of urban and industrial sewage; and the environmental specification of health and medical centres.

The statistics on natural resources protected by the Iran Department of Environment and the statistics of areas of forests, ranges, and deserts used to be included in the Chapter "Land and Climate" and the statistics on the amount of distributed fertilizers; and sold pesticides would be included in the Chapter "Agriculture, Forestry, and Fisheries" of the Iran Statistical Yearbook for the years 1368-1390. These statistics from now on are included in this chapter. This chapter also contains the statistics of emission of pollutant and greenhouse gases resulted from the burning of different types of fuels, which have been published in the Energy Balance Sheet of the Ministry of Energy since the year 1377.

This chapter also includes the statistics produced by the "National Water and Wastewater Engineering Corporation", the Ministry of Industry, Mine, and Trade", and the Ministry of Health, Treatment, and Medical Education.

Definition and Concept

National parks: an area of the nation's natural resources such as jungles, pastures, natural coppices, woodlands, plains, water and mountainous regions which presents distinguished samples of Iran's natural manifestations and is protected in order to provide sustainable preservation of its natural and varied conditions and create a suitable environment for reproduction and breeding of wildlife and growth of plants in a completely natural condition.

Wildlife habitats: an area of the nation's natural resources such as jungles, pastures, natural

coppices, woodlands, plains, water and mountainous regions which has typical natural habitats and special ecological conditions for wildlife and is protected in order to preserve or rehabilitate these protected habitats.

Nature reserves: protected areas of the country's nature, including jungles, pastures, plains, or mountainous regions which are habitat for important or rare species of wildlife and/or plantation.

National natural heritages: specific and rare species of plants or animal and unique picturesque settings or views, specific natural forms of the earth as well as very old trees which are protected in an appropriate area.

Greenhouse gases: The vapor of H₂O, CO₂, NO₂, CH₄, O₃, HFCs, and PFCs are called greenhouse gases.

Range: a land, be it a mountain, mountainside, or a plain, which is covered with herbaceous forage crops in grazing season and already grazed, is commonly known as range. Fallows, even though covered with herbaceous forage crops, are not included in this category.

Log: a portion of the trunk of a fallen tree, almost cylindrical, used to produce types of wood or veneer.

Sawn wood: articles of wood in specific sizes (length, width and height).

Pole: wood from the trunk of a tree the chest-high diametre of which is between 8 and 30 centimetres.

Pitprop: rounded piece of wood, almost two metres long, with a median diametre of 6 to 20 centimetres and used in mines.

Timber: round wood 1.5 to 2.0 metres in length and 20-40 centimetres in diametre that cannot be turned into sawn wood.

Pulpwood: wastes of articles of wood in different sizes and lengths.

Mulching: to blanket (mulching) vegetation over the soil to prevent it from erosion, keep its temperature and retain its moisture.

Living windbreak: a line of trees, shrubs or other vegetation planted across the usual wind direction to break the force of the wind and lower its speed, causing the sand and other materials carried by the wind to be deposited behind, in an order of size.

Artificial windbreak: rows of artificial obstacles (like fence, wall, dead branches, etc.) constructed across the usual wind direction to break the force of the wind and lower its speed, causing the sand and other materials carried by the wind to be deposited behind, in an order of size.

Preservation: selection and declaration of the areas of regions with high erosion or sensitive to erosion.

Forest: land which is covered with natural green coverage or planted trees and shrubs and its main economic product is wood. The tree nurseries are not considered as forest. Plastic bag seedlings and nurseries created for the purpose of forest protection and development of forests are considered as forest.

Sewage extension: refers to the part of minor sewage pipelines, including pipes and related

accessories, with a profile appropriate to siphon or contractual capacity, which carries joint sewages away from the siphon to the private line or to the public network for collecting sewages.

Customer of sewage and water: A customer who haas a contract with a sewage and water supplier for a determined time period and his/her needed extension(s) is/are installed.

Water and sewage extension for household use: This kind of extension is installed in the residential units for conventional consumption of drinking water or disposal of household sewage. (residential unit is defined as a place for living which has at least one room, a kitchen, a toilet , and has independent entrance or has an entrance leading to a common hall).

Public network for collection and transmission of sewage: refers to all installations and equipment, such as main collectors, used for

collection and transmission of sewage to water treatment house and pump houses of urban sewage and public side networks, all belonging to the Water and Sewage Company. The network is not responsible for collection, transmission and disposal of rainfall water flowing on passages, flood channels and channels inside and outside cities located in the customers' estates.

Sewage services: providing the services such as sewage removal and disposal to the public network for collection and transmission of sewage based on water consumption, and capacity and specifications determined and agreed in the contract related to the network installation whether the customer makes use of this capacity or not.

Treatment and removal of sewage: refers to all the operations related to the use of installation and equipment related to the wastewater removal and treatment such as wastewater treatment plant, pumping station, and different types of chlorination installations, channels and wastewater transmission lines.

Selected information

In the year 1392 the area of zones protected by the Iran Department of Environment was about 17086402 hectares of which the Ostans of Semnan with 2446736 hectares and Qazvin with 25344 hectares had the highest and lowest areas respectively.

In the year 1392, there were 1897 conflagrations in forests and ranges which shows 60 percent rise in comparison with the previous year.

In the same year, the volume of collected wastewater was 3492166 cu m which shows a 15.6 percent rise compared to the year 1391. The Ostans of Khuzestan and Tehran with 14.8 percent and 13.7 percent had the most collected wastewater volume and the Ostans of Kohgiluyeh & Boyerahmad and Mazandaran with 0.30 percent and 0.02 percent had the lowest.

In the year 1391, among the pollutant and greenhouse gases resulted from burning of

fuels in transportation, CO₂ with 130791492 tons had the greatest portion; namely 93% of the total pollutant and greenhouse gases emitted in this sector. It should be cited that the greatest portion of CO₂ production is related to the burning of gas oil and the lowest one goes to the liquefied gas.

In the year 1392 about 40 percent of the population of the country were under the coverage of the network for collection and transmission services of urban sewage which shows a 2.6 percent rise compared to the previous year. The highest and lowest shares of the population under the coverage of this network belong to the Ostans of Kordestan and Mazandaran with 91 and 6 percent respectively. In the year 1392, about 78.8 percent of hospitals enjoyed appropriate solid waste management system; moreover, about 75.4 percent of hospitals had appropriate sewage management system which shows a 4.7 percent decrease and a 1.4 increase in comparison with the previous year.

Restoration of pastures on degraded marginal lands...	1000ha	18	11	12	5	4590	4	2	0.9

1. National plan of "Range management and Balance of Livestock and Range", since 1384 was renamed "Sustainable Management of National Rangelands" and the name of some projects of which changed accordingly, too.

2. The decrease in figures compared to the previous year is due to adopting new organizational policies based on not preparing new projects and implementation of old projects.

3. Since the year 1384, the plan of "Improvement and Reformation of Range lands" has been provincialized and since 1386 its projects have been conducted in the form of "Improvement and Rehabilitation of Rangelands".
