## *Introduction*

This chapter is to provide proper round for a socio-economic comparison between Iran and other countries. Sources of the presented statistics are the United Nations statistical yearbooks on such fields as population, agriculture, manufacturing, energy, economy, communications, tourism and human development and OPEC Annual Statistical Bulletin.

The first table of the chapter shows the world's population by major areas for the mid-year 2013 and the period of 2020 to 2050. Table 2 shows information about the population, Population density, population aged under 15 and the population aged over 60 and urbanization rate of the some world countries. Table 3 represents crude birth and death rate in some selected countries . In Table 4, the information related to Human Development Index is presented for some world countries. Due to the significant role of oil and gas in the economy of the country in view of energy production, information provided in this connection among OPEC member countries claims a larger share than other sections of this chapter. Several points should be taken into consideration while using the statistics presented here:

1. As figures displayed in this chapter have been extracted from the United Nations Statistical Yearbook or other international sources, data for Iran may not always agree with the figures shown in other chapters.
  2. In the classification of regions presented in OPEC Statistical Yearbook, the former Soviet Union, Turkey and the Caribbean are included in East Europe, Europe and Latin America, respectively.
  3. Gabon and Indonesia have left OPEC in 1995 and 2008 respectively.
  4. Since 2007, Angola and Ecuador joined OPEC.
  5. Since 2010, the components used for calculating Human Development Index (HDI) has changed based on international recommendation according to the Table 23.4.
  6. It should be mentioned that changes in the figures of the indicator is due to revision made in the new HDR publication.
- It should be cited that based on the classifications used by UN, countries are classified into the following different groups in terms of HDI included in the latest UN HDR publication.
- A. Countries with HDI 0.80 to 1 are considered as countries with higher HDI
  - B. Countries with HDI 0.71 to 0.79 are regarded as countries with high HDI
  - C. Countries with HDI 0.55 to 0.69 are considered as countries with average HDI
  - D. Countries with HDI less than 0.54 are considered as countries with low HDI.

It is necessary to mention that this classification differs in the UN publications in the various years.

### ***Definitions and concepts***

#### ***Birth and death rate:***

Crude birth rate indicates the annual number of births and deaths per 1,000 total population. These rates are usually referred as "crude rates" since they do not take a population's age structure into accounts. Thus, crude death rates in more developed countries with a relatively large portion of high-mortality older population are often higher than those in less developed countries with lower life expectancy.

#### ***Human Development Index (HDI):***

A composite index measuring average achievement in three basic dimensions of human development long and healthy life, access to knowledge and education as well as a decent standard of living.

#### ***Life expectancy at birth:***

Number of years a newborn infant could expect to live if prevailing patterns of age-specific mortality rates at the time of its birth stay the same throughout the infant's life.

#### ***Mean years of schooling:***

Average number of years of education received by people ages 25 and older, converted from education attainment levels using official durations of each level.

#### ***Expected years of schooling:***

Number of years of schooling that a child of school entrance age can expect to receive if prevailing patterns of age-specific enrolment rates persist throughout the child's life.

#### ***Gross national income (GNI) per capita:***

Aggregate income of an economy generated by its production and its ownership of factors of production, less the incomes paid for the use of factors of production owned by the rest of the world, converted to international dollars using purchasing power parity (PPP) rates, divided by midyear population.

***Proven reserves:*** an estimated quantity of all hydrocarbons statistically defined as crude oil or natural gas, which is according to geological and engineering data recoverable with reasonable certainty from known reservoirs under existing economic and technological conditions.

***Crude oil:*** a mixture of hydrocarbons that exists in a liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after coming to surface. Production volumes reported as crude oil include:

- Liquids technically defined as crude oil;
- Small amounts of hydrocarbons that exist in the gaseous phase in natural underground reservoirs but turn liquid at atmospheric pressure after being recovered from oil well;
- Small amounts of non-hydrocarbons produced with oil.

***Natural gas:*** a mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with oil in natural underground

reservoirs at reservoir conditions.

**Gross product:** the total flow of natural gas from oil and gas reservoirs of associated-dissolved and non-associated gas.

**Petroleum products:** products obtained from refining crude oil, unsaturated oil products, NGLs, and other hydrocarbon compounds. These include aviation gasoline, motor gasoline, naphtha, kerosene, jet fuel, distillate fuel oil, residual fuel oil, liquefied petroleum gas, lubricants, paraffin wax, petroleum coke, asphalt and other products.

**Consumption of refined oil products:** consumption of products delivered across the nation, including fuels used by refineries themselves, and products from gas complexes, except fuels for vessels.

**Marketed natural gas production:** it is equal to the volume of natural gas gross production, minus the volumes of gas flared, injected into fields, and shrank. Consequently, it is the process of gas transformation and purification for extraction of natural gas liquids.

#### *Selected information*

Estimation shows that the population of the world in 2050 will be 9556 million people. Asia and Africa with 5164 and 2393 million people will be highly populated areas.

In 2013, a number of 187 world's countries were ranked according to the Human Development Index, among of which 49 countries were ranked with high human development in the world. Countries such as Norway, Australia, Switzerland, Netherlands,

USA, Germany, New Zealand, Canada, Singapore, and Denmark ranked from 1 to 10, respectively.

In the years 2011, 2012, and 2013, Iran's HDIs were 0.733, 0.749, and 0.749 respectively. Iran ranked 75<sup>th</sup> among the world countries in 2013 whereas its rank was 76<sup>th</sup> in 2012.

In 2013, Iranian life expectancy at birth was 74 years.

According to statistics issued by OPEC, Iranian crude oil production in 2013 was 3575 thousand barrels per day. Iran ranks the second among 12 OPEC member countries. Saudi Arabia with 9637 thousand barrels is ranked the first among the world's oil producing countries.

According to the cited statistics, Iran ranks the eighth among OPEC oil exporting countries in 2013. Besides, supplying 199 billion cubic metres of natural gas to consumption market, Iran is the largest gas supplier in OPEC.
