

# 6

# Mining and Quarrying

**S**urvey of mines-related activities and continuous dissemination of its results began by the then Ministry of Industry, Mine and Trade in the year 1333. Related statistics were published annually in the attachment of the publication "Statistics on Manufacturing Activities" until the year 1339, but they have appeared in a separate publication ever since under the title of "Statistics on Mineral Activities of Iran". The first census of mines of the country was carried out in the month of Azar in the year 1342 by the Ministry of Economy. Statistical Bureau of the Ministry of Economy gathered and published statistics on mines-related activities annually from the year 1342 to the year 1353, using statistics from nationwide mines registers and records. The second census of authorized mines of the country was conducted by the cooperation of the SCI and the Ministry of Industry, Mine and Trade in the year 1353. The SCI used to conduct a survey of a selected number of mines annually from the year 1353 to the year 1357. This economic sector suffered from a lack of statistics during the year 1357 to the year 1363, because in the interim neither statistical surveys were implemented nor comprehensive registers were available. The SCI conducted a survey of mines, covered by the public sector in the years 1364 and 1365, and also carried out the third census of mines of the country in the year 1366. Survey of mines has been conducted every year from the year 1367 to the year 1385 except for the years` 1370 and 1384.

The data presented in this chapter are from the aforementioned censuses and surveys as well as data from the mineral cooperatives companies reported by the Ministry of Cooperatives, Labor and Social Welfare .

It should be noted that:

(1) in the survey of the operating mines of the country, statistics on oil and gas, radioactive materials, and clay were not collected. However, due to the special importance of oil and gas statistics, the related information is separately presented in chapter 6.

(2) in the survey of operating mines, sand and gravel mines are enumerated by a sample survey, and other mines by a census.

(3) the ISIC Rev.4 is followed with appropriate modifications for the classification of activities in this sector.

#### ***Definitions and concepts***

**Mine:** collection of (cost-effective) mineral deposits, machinery, and facilities established for exploring, equipping, and exploiting and dressing of minerals. Dressing refers to all physical and chemical operations for separating some of waste materials from ores or separating ores from one another.

**Operating mine:** any mine with exploitation license from the Ministry of Industry, Mine and Trade (for mines other than sand and gravel) or from municipalities and governors offices (for sand and gravel) that has been under extraction (in some cases with dressing activities) for at least 30 successive or non successive days to produce marketable ores during the year of the enumeration.

**Private management:** management exercised by individuals or private institutions.

**Public management:** management exercised by the ministries, government organizations, Islamic Revolution Foundations, banks, municipalities and other public institutions.

**Workers:** all the individuals working full-time or part-time in mine-related activities inside or outside of the mine. The employed persons are divided into two groups: production line workers (skilled and unskilled) and other workers (administrative, financial and service) according to their duties.

**Production line skilled workers:** employed persons capable of performing a part of technical activities related to production line due to their know-how and experience. Engineers, technicians, craftsmen, foremen, skilled labourers, fitters, and drivers, are some examples.

**Production line unskilled workers:** persons working in production line whose jobs do not require any specific training or experience; such as labourers and porters.

**Other workers (administrative, financial and service):** employed persons engaged in clerical, administrative, financial and services activities in mines or their central offices but not engaged directly in extraction and production activities.

In presentation of statistics on employed persons, it is noteworthy that the method of "average number of employed persons" has been employed in the calculation.

**Compensation of employees:** see Chapter 5, Definitions and concepts.

**Mineral production:** all minerals obtained from a series of extraction activities which make them marketable. It should be mentioned that in some mining activities, minerals are supplied to the market without undergoing dressing process, whereas in others, minerals are supplied to the market after a series of physical and/or chemical treatments for separating some of the waste from ores, separating ores from one another, or increasing fineness of raw material. In addition, in one industry, several minerals may be produced. For example, copper ore mining activity includes minerals of copper ore and copper and molybdenum concentrates production.

**Value of products:** value of extracted ores and value of saleable mineral waste products at producer's prices; that is, the price of sale to customers at the mine.

**Capital formation(changes in the value of capital goods):** see Chapter 5, Definitions and concepts.

**Value added:** value of receipts (outputs) less the value of payments (inputs).

**Value of receipts (outputs):** value of mineral products, value of saleable mineral waste products, manufacture and major repairs of capital goods by mine workers and other receipts of the mine including receipts from contracts, minor repairs of buildings and office equipment, minor repairs of machinery, laboratory, etc.

**Value of payments (inputs):** value of purchased materials and non-durable tools and instruments, fuel consumed, water and electricity, and other payments including payments on contracts, minor repairs of building and office equipment, minor repairs of machinery, laboratory, etc.

**Cooperative:** see Chapter 5, Definitions and concepts.

**Mines cooperative:** a cooperative company engaged in excavation, exploitation, and sales of minerals obtained from operating mines

#### **Selected information**

On the basis of the country's operating mines survey results in the year 1391, there were 5316 operating mines. The results show that a total of 84922 persons were working in these mines and the number of workers increased by 0.4 percent in contrast to the year 1390.

In the year 1391, the value of mines products amounted to 101209 billion rials. Iron ore, copper ore and decorative stones with 51536, 21674 and 5935 bln. rials had the highest annual production value, respectively.

In the year 1391, the value added of the nation's operating mine amounted to 79164 million rials. Iron ore, copper ore, and decorative stones with 38740, 18761 and 4673 million rials had the highest value added, respectively. These three accounted for more than 78% of the sector's total value added.

Moreover, Kerman, Yazd and East Azerbaijan with 34056, 24500 and 3201 million rials had the highest value added of the country's operating mines among the provinces.

In the year 1391, over 8606 million rials of fresh investments were accomplished that over 71% relates to machinery, durable tools and administrative equipment and 17% goes to the construction and land.
